long horned & a stem in new from
common stock, then would they perish.

These unusual changes may explain a tendency
they might act on some important organ & be in heads

Without reference to either, but
simple change
like
Caucasian

The great difficulty appears, that
though some animals long domesticated
change not indefinitely (so we know
this), but most domesticated animals
are hereditary monsters. yet we
should have expected some race which
would have shown a slight appearance
to breed with our animals.

2^o The changes apparently being rapid
& superinduced, in domestic animals. The very character of speciation
is ~~the~~ character being hereditary, & as we know
we can give forms not hereditary, some that
are we might expect gradation.
